

THE camera battery charger for compact digital, SLR and video cameras

CamCaddy

CAMERA BATTERY CHARGER

Camcaddy is a versatile cradle that powers virtually every type of camera battery*. Whether a compact digital, SLR or video camera – Camcaddy does the lot!

Its intelligent electronics will automatically detect whether the battery requires a 3.2V input (for compact digital) or 7.2V (for SLR's etc). Simply select the required power supply (in-car or mains: both supplied) for instant charging.

Universal Charging Capability

CamCaddy will power virtually every type of "block" style*, lithium-ion battery, whether from a camera, mobile phone, PDA or GPS, etc. – check the camera compatibility on www.solartechtechnology.co.uk/camcaddy

Intelligent information

CamCaddy's LED's give a clear indication of battery charge status – press the silver power button to indicate the level of charge, from 25% to 100%.

Camcaddy gives a clear a warning (red LED) if a battery has been inserted the wrong way (i.e positive to negative and negative to positive) – thus ensuring battery damage is not caused by a reverse polarity connection.

Simple to use

Camcaddy is easy to use. Just position the battery between the silver support bar and CamCaddy's adjustable contact pins, select the required power supply (in car or mains) and you're ready for instant charging.

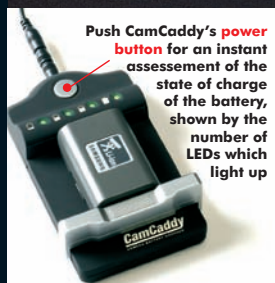

Use in over 130 countries

Camcaddy is supplied with **three** power supply attachments:

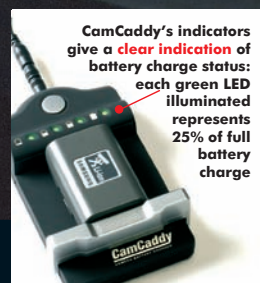

- USB cable:** connect to any PC or laptop for instant power
- In car:** connect to any 12v in car socket for instant power
- Mains:** supplied with UK, Europe and USA compatible plugs means Camcaddy can be used in over 130 countries

POWER BY MAINS, IN CAR, OR PC/LAPTOP**

Push CamCaddy's **power button** for an instant assessment of the state of charge of the battery, shown by the number of LEDs which light up

CamCaddy's indicators give a **clear indication** of battery charge status: each green LED illuminated represents 25% of full battery charge

Easy adjustment of CamCaddy's battery contact pins through **slider buttons** on the back

PACK CONTENTS

- CAMCADDY
- POWER / USB CABLE
- CAR PLUG for a 12v DC power supply
- UK MAINS PLUG for a 230v AC power supply
- EUROPEAN MAINS ADAPTOR for a 230v AC power supply
- USA MAINS ADAPTOR for a 120v AC power supply
- COMPREHENSIVE USER MANUAL

SPECIFICATIONS

Made from tough rubberised plastics
Max operating Voltage: 9.5v; Weight: 68g;
Size: 130 x 71 x 30mm; will accept a maximum battery depth of 67mm
Part No CC1005
