

## OUR FULL RANGE OF SOLAR LIGHTS

### ROMA

The **Roma** takes brightness to the next level with a **20 times bulb brightness over a standard solar light**. Capable of illuminating an area up to 7m (23 feet) in diameter and using SmartTime™ technologies, a 'Nichia' bulb and eco friendly Lithium ion battery, Roma is the only choice where nothing but the best will do! Supplied with stainless steel ground fixings and four pegs for staking into soil or grass. An excellent choice for patios, decks, driveways, paths, municipal walkways, car parks etc.

### TRENTO

A solar powered spot light that gives mains quality lighting. Using an oversized solar cell and 10 x super energy efficient double sized LEDs guarantees that **Trento** is the new standard in spot/flood light illumination. Fully articulated lamp head and solar cell for premium performance and durable aluminium casing for long term reliability.

### TORINO

**Torino** delivers the ultimate in illumination and its brightness can truly be compared with many mains low voltage garden lights. Benefiting from performance enhancing SmartTime™ technologies, a high power Lithium-ion battery and an incredible 6 bulb light cluster, Torino is a must for areas where a greater spread of light is necessary. Torino's lightpool is 2.5m (8') in diameter and is perfect for paths, driveways, patio edges or by ponds. Looks wonderful if used to create light on a favoured specimen shrub.

### MURANO

**Murano** blends modern technology with centuries old skill of hand blowing glass. Each unique glass globe contains luminescent crystals which, once dark, give a wonderful glow but when you add in a super bright LED bulb powered by our state of the art solar cell, the effect is truly wondrous. Once dark both **Aqua** and **Midnight** globes appear to magically float in the air. **Terra** is a great twist on the Murano theme – still made from heavy duty glass, the globe has an attractive "crazed" appearance. **Sunset**, like Terra, has a "crazed" appearance and at night, its multi-coloured bulb glides through green to blue to amber.

## SOLARMATE UTILITY LIGHT RANGE

**SolarMate Point 5** provides class leading brightness using an impressive 10 x super bright white LED light housing, enabling it to illuminate an area of 9sq m for up to 3 hours per day. Quick and easy to assemble, SolarMate Point 5 is ideal for sheds, summer houses or when camping. Include all fixings. Rechargeable batteries included.

**SolarMate Secure 1** is a high quality movement activated security light. SolarMate Secure 1 uses 3 x double sized LED's for intense brightness capable of flooding an area of 5m with light. SolarMate Secure 1 has a fully adjustable lamp head for optimum orientation and its PIR sensor has variable burn time and sensitivity settings. Include all fixings. Rechargeable batteries included.

**SolarMate Secure Professional** is the ultimate PIR movement activated security light and has been designed for busy domestic or commercial locations such as public passageways, forecourts, car parks, driveways etc. Using a powerful 2.5 watt solar panel and a 45 LED light unit ensures an area of 100sq m can be flooded with light. SolarMate Secure Professional has a fully adjustable lamp head for optimum orientation and its PIR sensor has variable burn time and sensitivity settings. Include all fixings. Rechargeable batteries included.

**SolarMate I & II** are mains-free lighting solutions for remote locations such as workshops, stables, summer houses, garden offices, garages or sheds. The SolarMate range provides mains quality interior lighting at a fraction of the cost of installing a grid connection. Both SolarMate I and II include a premium crystalline solar panel, all fixings, fuses, switches and cable, energy saving light bulbs, wall switch and, of course, detailed assembly instructions.

## SOLAR GARDEN LIGHT INSTRUCTIONS

### Venetian

Part No SM41303

**IMPORTANT: PLEASE READ BEFORE FIRST USE**

Thank you for purchasing this premium Solar Mate Venetian Light. It is made using the finest materials and incorporates leading edge technology to provide outstanding performance and beauty. After all, we have our motto to live up to.....brighter for longer!

**How Venetian solar garden light works**

During the day the solar panel on the top the Venetian garden light converts sunlight and daylight into electricity which in turns recharges its internal battery. At dusk, the Light Emitting Diode (LED) will turn on automatically and will be powered for up to 6 hours by the battery. The Venetian garden light comes complete with a pre-installed solar rechargeable battery. This should be replaced when the charging ability is decreased and should last for approximately two years.

**Choosing a location for the Venetian solar garden light**

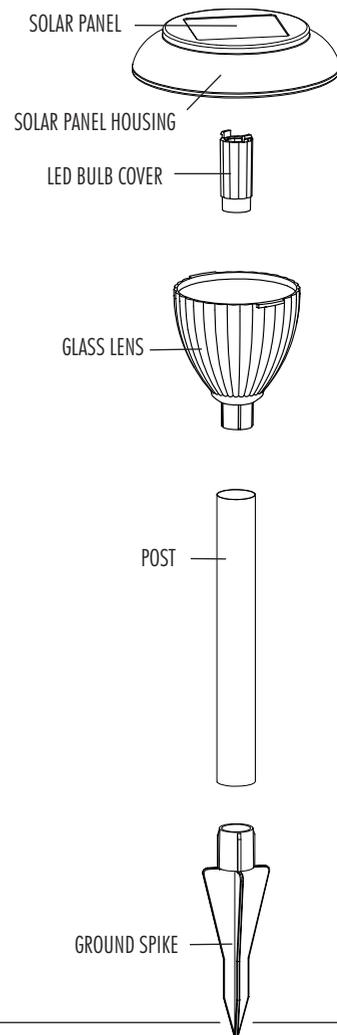

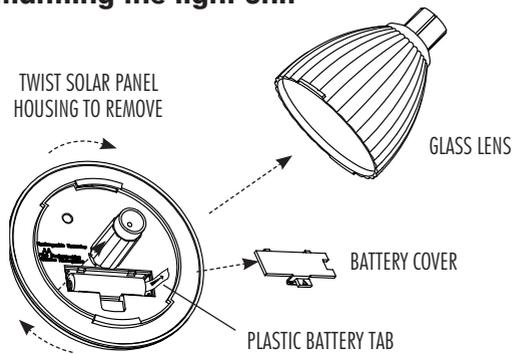

The location, weather conditions and the seasons will affect the number of hours the LED's are illuminated for. Ideally the Venetian solar garden light should receive 8 hours of full sunlight, which will enable it to illuminate for up to 6 hours. If the Venetian light is placed in a shaded location the battery will not charge fully, reducing the hours of night-time illumination.

**How to assemble the Venetian solar garden light**

Insert the ground spike into the post and push the spike into the ground. Loosen hard packed ground first otherwise damage may occur to the post or spike. Then push the lamp head onto the post.

**Note - under no circumstances push down on the lamp head as both damage to the light and personal injury may occur.**

**Dismantling the light unit**

**First time use of the Venetian solar garden light**

Twist the stainless steel lamp head from the glass lens in an anti clockwise direction to separate the two pieces. Remove the small plastic tab from the battery holder and re-fit the lamp head to the lens. Depending on how much charge is in the battery and at what time of day the lamp is first positioned in the garden will determine how well the light will illuminate on the first evening. Once the light has been in the sun for a few days optimum operation will be achieved.

At dusk the Venetian will switch ON automatically and will burn for as long as there is power in its battery and then it will switch OFF, ready to be charged up (by its solar cell) the following day ready for illumination the next evening.

**Tips for using the Venetian solar garden light**

- Do not place the Venetian garden light near night time light sources such as street lights or flood lights as this may cause the lights to turn off at night.
- To prolong the life of the Venetian solar garden light and reduce the risk of corrosion, install away from salty, corrosive or highly fertilised areas.
- Ensure that you do not scratch the surface of the solar panel and ensure that you keep the surface free of dust and debris at all times.
- The LED in the Venetian garden light is not replaceable and should never be tampered with.
- To clean the solar garden light, wipe over using a soft, damp cloth.

**Replacing the battery in Venetian solar garden light**

1. Remove the lamp from the ground.
2. Twist the glass lens from the lamp head and the battery can be accessed via the removable hatch.
3. Remove the battery and replace with a new rechargeable battery of the same type. A replacement battery can be purchased from Solar Technology International Ltd at [www.solartechology.co.uk](http://www.solartechology.co.uk).
4. The Venetian battery is an AA NiMH 1.2V 600mAh battery, Part No. L-AA600mah (One needed per Venetian Light)
5. Reverse the above procedures and position the lamp back in the garden.

**Warranty**

Solar Technology International Ltd garden lights are supplied with a 24 month warranty, excluding the battery. Should a failure occur during this time Solar Technology International Ltd will repair or replace any faulty parts, at its discretion. Solar Technology International Ltd does not accept any liability for any 3rd party damage how so ever caused or any costs associated with the return postage of faulty products.

These warranty conditions in no way affect your statutory rights. A full set of Solar Technology International Ltd terms and conditions are available on request.
